DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 33,43,46,49-50,53-55,58-64,67-68,70-71,73-74,76-81 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-4,6-7,12-24,27-30,32-34 of U.S. Patent No. 6,742,966. Although the conflicting claims are not identical, they are not patentably distinct from each other because the both call for an expansion shell assembly for mine roof bolts, comprising: an expansion member threaded onto an associated mine roof bolt; a support device annularly disposed around the associated roof bolt; and an expansion shell annularly disposed around the associated roof bolt between the expansion member and the

support device, the expansion shell having a base ring for engaging the support device and fingers for engaging the expansion member, wherein the engagement between the base ring and the support device permits axial traverse movement of the support device into the expansion shell for tensioning the roof bolt after the fingers of the support device have been expanded into an associated wall defining a bore hole into which the associated mine roof bolt is inserted.
